1. INTRODUCTION

Many people want to cook at home, but they often don't know where to start—especially when all they have are a few leftover ingredients in their kitchen accompanied with their limited knowledge in cooking. Aspiring home cooks need a simple way to discover what dishes they can make using only what they already have.

That's where the proposed application comes in.

Introducing "**WhatsCookin**". It is a mobile application that takes your ingredients and turns them into something that meets your appetite!

1.1. Purpose

The purpose of the app is to help users discover meals they can cook using the ingredients they already have, reducing food waste and making home cooking easier and more accessible. It also aims to simplify recipe searching by allowing them to filter recipes based on cooking time, cuisine type, difficulty, and personal preferences.

2. GENERAL DESCRIPTION

WhatsCookin is a mobile application where users can list their ingredients and their preferred type of cuisine and transform them into delicious meal recipes.

Aside from that, users may also upload their own recipes on the application for general use and rate other recipes too.

2.1. Product Context

WhatsCookin is a mobile application made for people who want to start creating home cooked meals and challenge themselves into exploring, recreating, and even create their own recipes.

The application lets the users find recipes based on specific criteria (Time, Ingredients, Cooking Difficulty, Cuisine, Personalized Taste Profile). It will also allow them to leave ratings on recipes and post their own for other users to see.

2.2. User Classes and Characteristics

User/Role	Example	Frequency of Use	Security/Access, Features Used	Additional Notes
User	A person who wants to try home cooking.	Daily or whenever they want to have a home cooked meal	Standard user account; Register, login, view recipes, upload recipes bookmark/favorite recipes, and leave reviews	The user interface should be responsive and simple
Administrators	Support staff	As needed	Full system access	N/A

2.3. Functional Requirements

The following are the core functions of **WhatsCookin**:

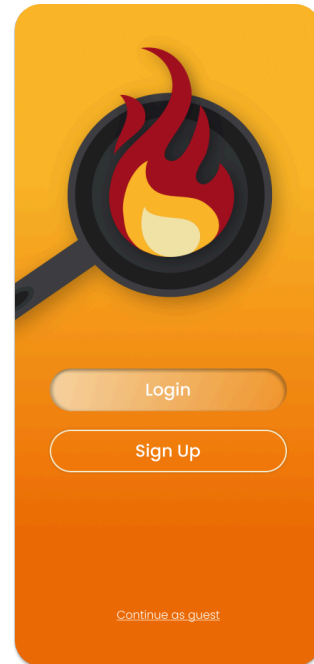

- User Segmentation
 - Users

- Can access recipe information, upload their own recipes, leave a review, and favorite/bookmark recipes to try.
- Administrator
 - Has access to application management.
- Take a pic!
 - Users can take a picture of their ingredients instead of typing inside the application.
- Swipe-Based Discovery:
 - Users can browse recipes through a swipe interface (left = pass, right = like, up = favorite).
- Search and Filter Options:
 - Users can filter recipes by Category and ingredients.
- Smart Substitution
 - If an ingredient is missing, the app suggests an alternative.
- Recipe Profiles:
 - Each recipe will list the ingredients needed, time to cook, difficulty, and a step by step process for the recipe.
- User Submitted Recipes
 - Users may upload their own recipes for other people to see and use.
- Ratings and Reviews:
 - Users can provide ratings and short reviews for recipes.
- Favorites and Bookmarks:
 - Users can save recipes they like for quick access.
- Administrative Controls:
 - Administrators can manage user accounts, verify establishments, and moderate reported reviews.
